

Device Protect365

Backup Servers, Databases, Virtual Machines, Endpoints,
Synology and QNAP with Unlimited Licences Included

In today's digital age, data is the lifeline of our business, whether it's server data, databases, virtual machines, external NAS devices or endpoints, protecting our vital information is non-negotiable. That's where Device Protect365 comes to the rescue. Our cutting-edge Software as a Service (SaaS) solution is your ultimate ally in safeguarding your critical data 24/7.

What is Device Protect365

Device Protect365 is an all-encompassing cloud backup solution designed to secure your data with automatic and incremental backups allowing you to have that piece of mind that should a disaster happen, you will be able to restore your data anytime. The added benefit is we give free licenses so you can backup unlimited users and machines plus we give the flexibility for you to choose where you want to store your data.

Features That Set Us Apart

1. Comprehensive Data Coverage

- Backup Servers: Protect your servers from data loss, ensuring business continuity.
- Databases: Safeguard MS SQL, MySQL and Oracle therefore preserving your valuable information.
- Virtual Machines: Secure your VM's and Hyper-V environments to minimize any downtime risks.
- Endpoints: Keep your endpoint devices safe to prevent any data breaches.
- Synology and QNAP: Ensure your NAS devices are backed up to have added protection.

2. Unlimited Licenses Included

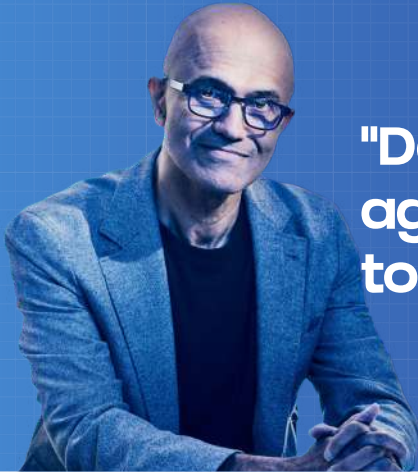

No more worrying licence costs, backup your data to the cloud or locally from as many machines as you want. This allows you to scale your protection seamlessly as the business grows.

3. Automated Backup Scheduling

Through our interface you can schedule daily, weekly, monthly or yearly backups at any time to suit your requirements so you never miss protecting your data.

4. Quick and Easy Recovery

Effortlessly recover your data within mins and choose what and where you want to restore to i.e. either the same or alternative location.

"Data is the currency of the digital age. Safeguarding it is paramount to your success." ~ Satya Nadella, CEO Microsoft

With Device Protect365, you can store your data in strategically chosen locations from the US, UK, EU and Singapore.

Benefits You Can't Ignore

1. Unparalleled Data Security

Rest easy knowing that your data is protected by 256 AES state-of-the-art encryption and security protocols, keeping it safe from threats and vulnerabilities.

2. Business Continuity

Minimize downtime and ensure your business operations run smoothly, even in the face of unexpected disasters or data breaches.

3. Scalability

As your business evolves, so do your data protection needs. With unlimited licenses, you can adapt without constraints.

4. Global Compliance

Stay compliant with data regulations in different regions. Thanks to our multi-location data storage options, your data is encrypted at flight and at rest ensuring its fully secure from any 3rd party access.

5. Cost-Effective

Eliminate the need for expensive hardware and infrastructure. Device Protect365 is a SaaS cloud backup solution that offers comprehensive data protection at an affordable cost.
